

**Flow Rates up to 30 GPM**

**Stainless Steel Oil-Water Separator Cabinet**

**Up to 1000 sq. ft. of Coalescing Surface Area**

**High-Output Ozone Treatment**

▲ The genius of the system is the maze in the oil-water separator. Up to 1,000 sq.ft. of oleophilic (oil-loving) **Inclined Coalescing Plates** are meshed together forcing the waste stream to slowly change course hundreds of times. This constant shifting of the flow path causes oil droplets to group and float and solids to sink. The plates, made of polypropylene, are held together by adjustable straps, which can be used to lift the pack out of the stainless steel tank for cleaning.

■ Tightly-woven polyester **Cartridge Filter**, with 500 sq.ft. of filtration area, prevents dirt and other solids larger than 5-20 microns from returning to the pressure washer and damaging the high-pressure pump. Filter housing is easily opened so elements can be cleaned and reused.

■ Nearly 800 lbs. of a special **Multi-Media Blend** of gravel, sand and anthracite provide advanced filtration of suspended solids to as fine as 40 microns; filter backwash mode is aided by a finger-like lateral assembly which prevents channeling.

■ Optional automated **ORP/pH Controller** monitors and injects pH balancing agent and oxidizer for optimum water treatment and odor control.

■ **Top-of-the-line, Ozone Generator** injects bacteria-and-odor-killing ozone using a mixing procedure that ensures up to 99% contact with the waste stream.

■ **1/2 hp industrial Sump Pump** constantly recirculates water. Centrifugal pump includes check valve, level control float switches and strainer basket.

■ **Carbasorb Filter** with up to 300 lbs of degassed, virgin activated carbon, removes through adsorption heavy metals, pesticides and solvents, including benzenes, diesel fuels, acetones and other hydrocarbons.

■ Convenient located and clearly labeled **Hose Connections** are for recycled water outlet; automatic rainwater overflow protection; fresh-water inlet for water level control; and fresh-water bypass for rinse-quality water.

■ Clear piping and **Water Flow Meter** allow for easy monitoring and adjusting of the flow rate.

Delta-1500A

■ Easy to read **NEMA 4 Control Panel** features: 24-hour filter timer for passing ozonated water through the filters during periods of shutdown; on-off and override switches for backwashing; and hour meter for service records.

■ **Self-flushing Transfer Pump** maintains pressure of 20 PSI in surge tank so water is always ready for use by pressure washer.

Delta-3000A

■ Made of polypropylene and stainless steel the **Oil Skimmer** has an adjustable baffle for skimming free oil. Oil is collected in skimmer container for disposal and/or recycling.

# DELTA

## Compact, Self-Contained, Wash-Water Treatment and Recycling System

Flow Rate up to 30 GPM | Up to 1000 sq. ft. of Coalescing Surface | Up to 500 sq. ft. of Cartridge Filter | Ozone Treatment

### WHY CHOOSE WATER MAZE'S DELTA

The Delta wash-water recycling systems are ideal when a wash facility is already equipped with a collection pit or pre-treatment system.

With flow rates of up to 30 GPM, the Delta is self-contained and has a low profile so it can be conveniently and relatively quickly installed inside a building or next to a wash pad.

As with other Water Maze systems, the Delta features the proprietary "maze" design that uses oleophilic—oil-loving—coalescing plates, which are meshed together and inclined at just the right angle to produce highly effective oil-water separation.

There are two models of the Delta for flow rates of 15 and 30 GPM.

The Delta has a stainless steel oil-water separator and all of the tanks and filters are connected with UV-resistant Schedule 80 PVC pipe. The entire unit is mounted on a rugged, welded-steel skid with stainless steel studs

and bolts along with a weather-resistant powder coat finish. Odors are kept in check by a high-output Series 400 ozone generator with four UV lamps. Electrical connections are in a NEMA 4 water-tight control box.

### DELTA Specifications

MODEL	DELTA-1500A,B,C	DELTA-3000A,B,C
Maximum Flow	1-15 GPM	1-30 GPM
Oil-Water Separator Capacity	125 gal.	250 gal.
Electrical: Volts, Phase, Amps	230V 1ph 16A, 230V 3ph 10A, 460V 3ph 8A	230V 1ph 29A, 230V 3ph 16A, 460V 3ph 9A
Sump Pump	1/2 HP Centrifugal	1/2 HP Submersible
Filter Pump	1/2 - 3/4 HP	2 HP
Transfer Pump Centrifugal	3/4 - 1 1/2 HP	2 HP
Oil Skimmer	Continual Flow, Decanting	Continual Flow, Decanting
Ozone Generator	Series 400, 4 UV Lamps	Series 400, 4 UV Lamps
Coalescing Surface Area	500 sq.ft.	1000 sq.ft.
Media Filter	600 lbs.	800 lbs.
Carbon Filter (degassed)	200 lbs.	300 lbs.
Cartridge Filter Surface Area (20 micron)	500 sq. ft.	500 sq. ft.
Dimensions	8'L x 5'W x 4'H	8'L x 10'W x 4'H
Ship Weight (approx)	2,420 lbs.	4,200 lbs.

Distributed by:

**OPTIONS INCLUDE:** Upgrade to stainless steel platform; advanced digital ORP/pH Controller for automated wastewater management; extra-high output corona discharge (CD) ozone generator
